CompTIA Advanced Security Practitioner Certification – Objectives

CompTIA Advanced Security Practitioner

The CompTIA Advanced Security Practitioner certification designates IT professionals with advanced-level security skills and knowledge.

The CASP exam will be available at U.S. and Canadian Pearson VUE centers on Sept. 15. Broader distribution is tentatively scheduled for December 2011 or January 2012.

The CompTIA Advanced Security Practitioner certification is an international, vendor-neutral exam that proves competency in enterprise security; risk management; research and analysis; and integration of computing, communications, and business disciplines.

The exam covers the technical knowledge and skills required to conceptualize, design, and engineer secure solutions across complex enterprise environments. It involves applying critical thinking and judgment across a broad spectrum of security disciplines to propose and implement solutions that map to enterprise drivers. For more detailed information, [download the exam objectives](#).

While there is no required prerequisite, the CASP certification is intended to follow [CompTIA Security+](#) or equivalent experience and has a technical, hands-on focus at the enterprise level.
