CompTIA Cloud Essentials Certification – Objectives

CompTIA Cloud Essentials

The CompTIA Cloud Essentials specialty certification demonstrates an individual knows what cloud computing means from a business and technical perspective, as well as what is involved in moving to and governing the cloud.

The CompTIA Cloud Essentials exam covers:

- Configuration of networks, including archive, backup, and restoration technologies
- Business continuity and storage administration
- System integration and application workload
- Basic troubleshooting and connectivity

The Cloud Essentials exam objectives were originally developed by ITpreneurs in cooperation with the Cloud Credential Council, a membership body dedicated to vendor-neutral training in cloud computing and comprised of companies including IBM, Cisco, EMC, HP and ING.

While it is not required, CompTIA recommends that a candidate have at least six months of experience in an IT environment, with direct involvement in IT-related tasks, responsibilities or decision-making.
